

# IS A CAREER IN CLINICAL RENAL PHYSIOLOGY FOR YOU?

# AUT

There is an urgent need for more qualified staff to provide dialysis to people in Aotearoa New Zealand. This is an opportunity for health professionals, those who are currently studying or have an existing qualification with an emphasis in science to consider clinical renal physiology as a career.

## Courses in Renal Physiology (level 7), Semester 2, 2022

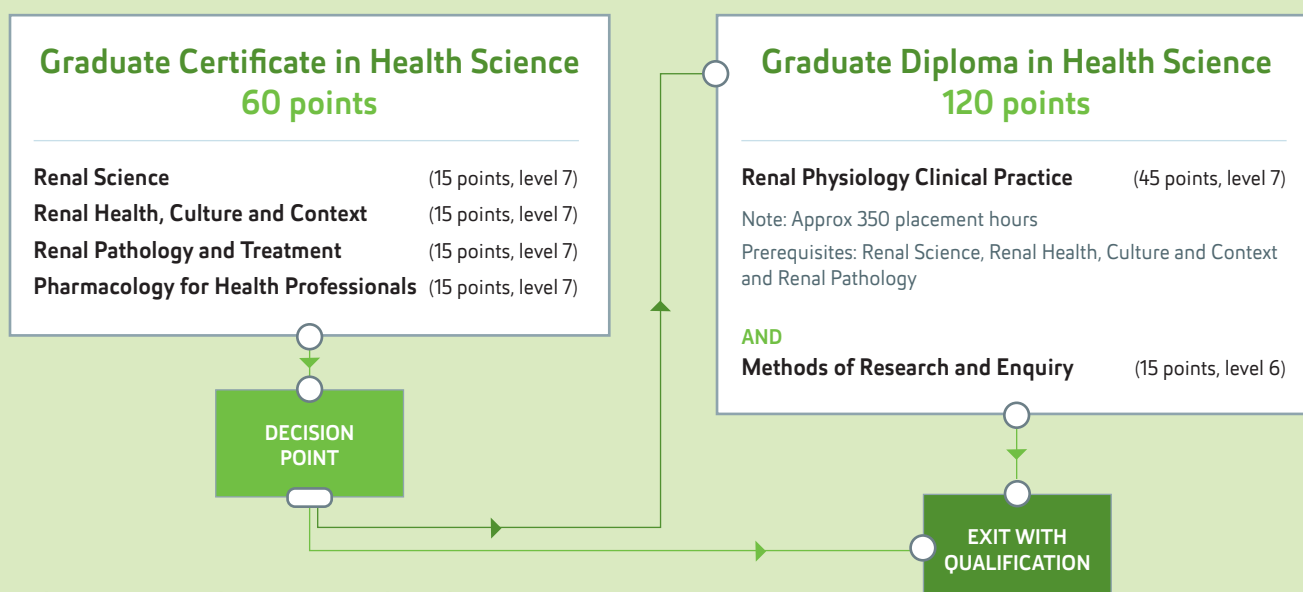

The Faculty of Health and Environmental Sciences at AUT offers educational pathways across many clinical areas of practice. From Semester 2, 2022 individual courses relating to renal physiology will be offered to small groups of students.

### Qualification

The courses are included in the Bachelor of Health Science (BHSc) and also the Graduate Diploma (Grad Dip) and Graduate Certificate (Grad Cert) in Health Science. Students who meet the requirements to enrol in these qualifications may credit any relevant courses they have achieved as outlined in the regulations.

## Enrolment pathways for students wishing to study renal physiology courses

Each of these courses involves approximately 150 hours of learning including 30 hours in class (North Campus).

Please contact Debra Spinetto for advice on enrolment pathways:
