

Questions formulated based on a study done by Sanabria, R. M., Hutchison, C. A., Vesga, J. I., Ariza, J. G., Sanchez, R., & Suarez, A. M. (2021). Expanded Hemodialysis and Its Effects on Hospitalizations and Medication Usage: A Cohort Study. *Nephron*, 145(2), 179-187.

Questions prepared by Ruchee Pant, Prabhulal Pillai and Madhivanan Devraj

1. According to the study, what is the significant effect of expanded hemodialysis in hospitalization of patients?
2. The expanded hemodialysis removes ----- and retains -----
3. According to this study, what is the major impact of expanded hemodialysis in medication usage?
4. In this study, the researchers observed reduction in adverse reactions after switching to expanded hemodialysis. True/false?
5. What are the potential patient benefits of expanded hemodialysis?
6. According to this study, what is the major contributing factor of ESKD as a burden in healthcare system and patient?
7. In this cohort study, the authors found that there is no significant reduction in absolute hospitalization and readmission rates. True/ false?
8. The observations in the general population of this study shown that the increasing hsCRP is associated with -----
9. What are the changes observed the level of albumin in high flux hemodialysis and in expanded hemodialysis?
10. According to this study, the single pool kt/v was improved after expanded hemodialysis therapy. What does it indicate?
11. What is expanded Haemodialysis (HDx) and how is it different from Haemodialysis (HD)?
12. Patients of age 18years or greater was one of the inclusion criteria for this study. T/F?
13. What were the 3 inclusion criteria for this study?
14. How were the Median phosphorus level and Median Erythropoietin resistance different while being on HF-HD and the 12 months after switching to HDx?
